Dendrite SCHOOLS CONNECT

What does this mean for State Schools?

Tens of thousands of pupils benefit from partnerships between ISC independent schools and state schools every year.

Dendrite Schools Connect enables schools to:

- Develop mutual communication between ISC independent schools and state schools.

- Share valuable knowledge, expertise and resources which can help build strong relationships.

- Interact with students of different backgrounds, which leads to greater mutual respect for each other.

- Provide opportunities for students and teachers to expand their learning environments in new locations and through different teaching methods.

- Expand networking opportunities for staff , students and parents which allow for new communication opportunities, collaboartion and Continued Professional Development opportunities.

- Exchange knowledge of problems encountered and overcome within both independent schools and state schools.

- Increase enthusiasm towards new and exciting experiences.

What does this mean for Independent Schools?

For as little as £149 per year, Independent Schools can network with 10 local State Schools at Primary and Secondary level.

Dendrite Schools Connect enables Indpendent Schools to:

- Use Communities to publish high quality STEM learning and teaching content to their Community Library. This content will then be auto-distributed into the Bulletin boards of all corresponding subject teachers connected within the network.

- Talk to parents about their partnership & invite companies to sponsor their network of connected state schools to take part in STEM Challenges available in Dendrite Connect by signing up to join the Schools Connect Partnership.

- Promote events such as holiday camps hosted at the independent school by posting updates to networked state schools. Using the integrated event booking tool, schools have the ability to create events and manage attendance directly from within Dendrite Connect.
